Potential API Misuse

② API misuse description

You may want to check whether the receiver of getAsString() is not equal to null. 119 Github code examples also do this.

③ Fix suggestion

```
if (match_number!=null) {
    match_number.getAsString();
}
```

⑥ Pagination for multiple misuses

try this out, I did not test it, but from what i see in you
of issues in your code, alliances is not an a json array
arrays, they are json objects based on what i see in y

```
JsonObject rootobj = root.getAsJsonObject();
JsonElement match_number = rootobj.get("match
JsonObject alliances = rootobj.getAsJsonObje
JsonElement blue = alliances.getAsJsonObject
JsonElement red  = alliances.getAsJsonObject

System.out.println(match_number.getAsString
```
